

# Press release

**RECHNER**  
**SENSORS**

Inductive sensors for 150 °C and 180 °C ambient temperature

The new inductive sensors from RECHNER can be used for detection of metal objects in ambient temperatures of 150 °C and 180 °C. The electronics are self contained within the housing, like all conventional inductive sensors. This means with these sensors a separate evaluation unit is no longer required.

The sensors are available in the body sizes M 12 x 1, M 18 x 1 and M 30 x 1,5. Power supply 10...35 V DC. The sensors are available for both for flush mounting and for non-flush mounting in metal.
